Friendship is probably one of the most discussed topics throughout the human history, so it's expected of many philosophers to give their opinions on the subject. Aristotle once said, "A friend to all is a friend to none". I think it's hard to disagree with the philosopher, considering the following arguments:

Firstly, it's obvious that by being a friend to every one ~~any one~~ one makes his friendship lose all the value. What is the point and meaning behind such friendship? There is none.

Secondly, not only such friendship is valueless, but it also leads to many ethical problems. If someone is friends with everyone, could such person be able to tell the difference between good and evil people? Of course not, because he's friend with both of these groups.

And finally one could argue that such friendship cannot even exist. ~~The person or friend to everyone~~ ~~is not possible~~ It's not possible, for example, to be friends to a killer and to a relative of a killed person. All people are different and ~~can~~ neither can, nor should be friends to everyone.

In conclusion we can say that Aristotle was right, no one can be friends to ~~any~~ everyone. Such friendship, even if it could exist, would not exist in a ~~single~~ couple of days.
